

The AI film studio. Script in. Film out.

ShotBreak turns a screenplay into a finished, continuity-correct film – automated shot breakdown, locked character & location references, 82 specialist AI agents, and the world's best video models in one pipeline.

WORKING PRODUCT

02

THE PROBLEM

AI can generate video. It still **can't make a film.**

01 • CONTINUITY – THE CORE FAILURE

Clip tools are prompt roulette

Today's generators produce impressive 5-10 second one-shots – but the same character comes back as a different person in every take. Locations drift, lighting resets. Nothing cuts together.

× SAME PROMPT, THREE DIFFERENT "PROTAGONISTS"

02 • COST

Traditional production is out of reach

Crews, locations, gear, and weeks of post put narrative video beyond nearly every creator, agency, and small studio.

03 • FRAGMENTATION

Five apps per finished minute

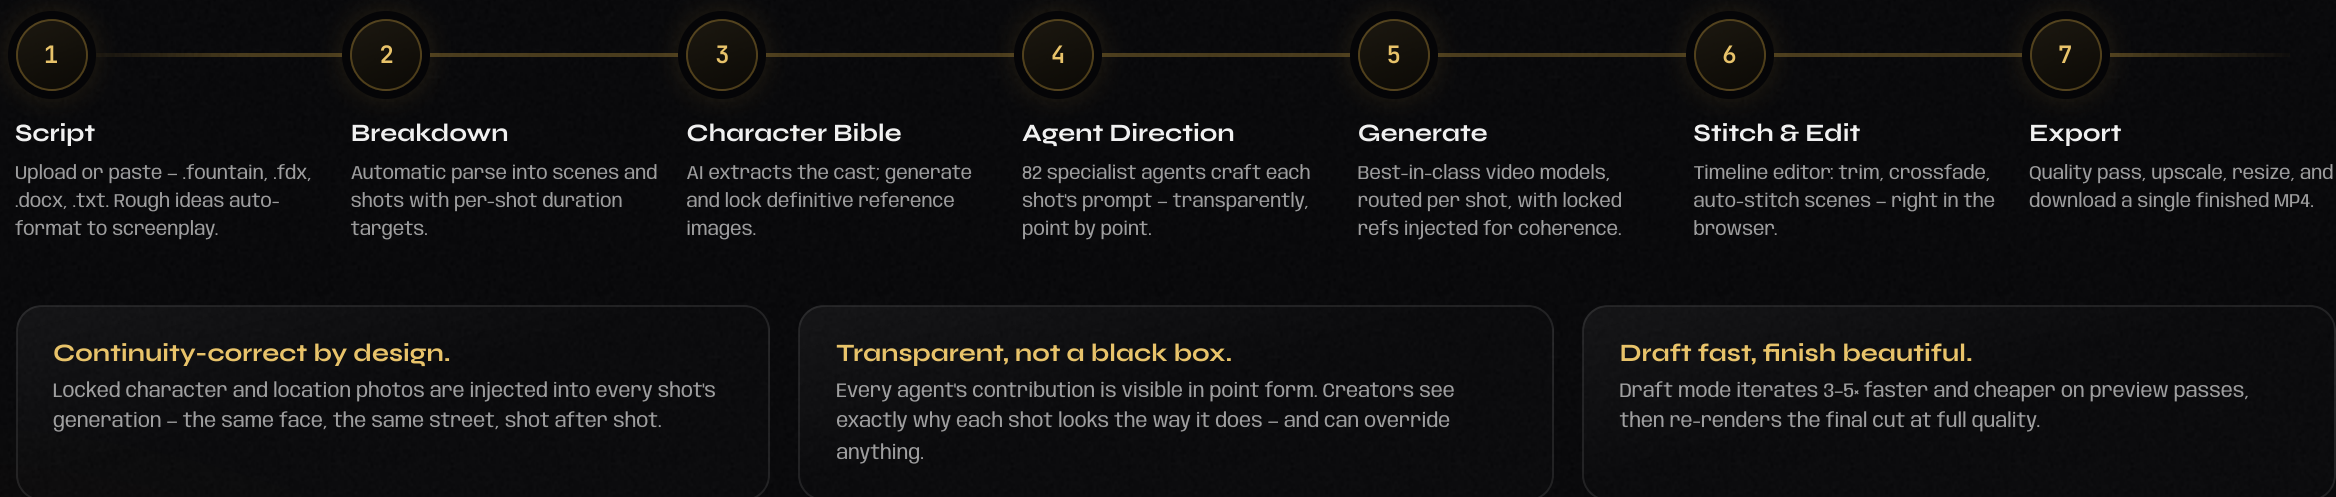

Script here, character art there, generation in a third tool, upscaling in a fourth, editing in a fifth. Every hand-off loses fidelity and hours.

The gap between a cool clip and a watchable film is continuity and workflow – not model quality. The models crossed the threshold. Nobody owns the production layer that turns their output into finished stories.

— THE SOLUTION

One pipeline: script to screen.

Paste a screenplay. ShotBreak breaks it down, keeps every character and location visually consistent, directs every shot with specialist AI agents, generates with the best model for the job, and cuts it together – all in the browser.

The Generation Hub – a working studio, already built.

MOAT 01

Reference-locked continuity

Locked character and location photos ride along with every generation call. Continuity is enforced by the pipeline, not hoped for in the prompt.

MOAT 02

Model-agnostic routing

ShotBreak sits above the model wars. As new video models leapfrog each other, users always render on the current best – no lock-in to any single lab.

MOAT 03

Near-zero render infrastructure

Stitching and export run client-side in the browser; generation is metered API spend. Margins scale with subscribers, not with a server farm.

INTEGRATED MODELS

- SEEDANCE 2.0 TURBO
- WAN 2.7
- SORA 2
- VEO 3.1
- GROK IMAGINE
- FLUX (SCHNELL · DEV · PRO)

— WHY NOW

The models arrived. The studio layer didn't.

QUALITY — CROSSED THE THRESHOLD

Video generation got good enough

The newest generation of models (Sora 2, Veo 3.1, Seedance 2.0, Wan 2.7) produces footage audiences will actually watch. The bottleneck moved from pixels to production.

ACCESS — COMMODITIZED

Every frontier model is an API call

Aggregated APIs put the best models inside any application on day one — and falling per-second costs keep expanding what a \$15/month subscriber can render.

DEMAND — EXPLODING

Creators want narrative, not clips

Short-form drama, AI films, faceless channels, and agency spec work are surging — made by exactly the users clip-generators strand at the editing stage.

The window: whoever owns the workflow becomes the default studio. Model labs compete on generation quality and rent their models to everyone. The durable position is the layer where creators organize scripts, lock their cast, and finish films — that's where projects, assets, and switching costs live.

A creator economy hungry for Hollywood output.

\$480B

Creator economy by 2027

Roughly doubling from ~\$250B in 2023 (Goldman Sachs estimate) – and video is its largest, fastest-compounding format.

200M+

Creators worldwide

Plus millions of agencies, marketers, indie filmmakers, and studios producing video professionally.

\$300B+

Film & video production

The spend AI-native production compresses – and re-opens to budgets that could never afford it.

30%+

AI video tools CAGR

Among the fastest-growing generative-AI categories, still without a category-defining workflow product.

Beachhead: indie filmmakers, faceless-channel operators, and small agencies producing narrative short-form – high volume, underserved by clip tools, and priced out of traditional production. Land with the \$14.99 Creator tier, expand into studio and team plans.

FIGURES ARE DIRECTIONAL INDUSTRY ESTIMATES (GOLDMAN SACHS 2023; PUBLIC CREATOR-ECONOMY & MARKET RESEARCH). TO BE REFINED WITH FORMAL SIZING.

Subscription base, usage-metered upside.

TIER 1 • LIVE

Free

\$0

- ✓ No credit card required
- ✓ Full pipeline on a starter project
- ✓ Watermarked / limited exports
- ✓ The hook: taste the whole studio

TIER 2 • LIVE

Creator

\$14.99/mo

- ✓ Unlimited projects
- ✓ Character Studio & reverse mode
- ✓ All export formats & quality tools
- ✓ Credit packs meter premium image/video models – heavy compute is pass-through, protecting margin

TIER 3 • ROADMAP

Studio / Teams

\$49-99/mo

- ✓ Team workspaces & shared asset bibles
- ✓ Priority rendering & volume credits
- ✓ Brand kits for agencies
- ✓ API access for programmatic production

Unit economics logic: the subscription covers workflow value (breakdown, agents, continuity, editing – cheap to serve, in-browser); raw generation compute is metered as credits at a margin. Costs fall as model prices drop; price stays.

COMPETITION

Others sell cameras. ShotBreak is the studio.

PLAYER	SCRIPT → SHOT BREAKDOWN	LOCKED CHARACTER CONTINUITY	MULTI-MODEL (ALL LABS)	AGENT-DIRECTED SHOTS	BUILT-IN EDITOR & EXPORT
Runway · Pika · Luma Clip generators	●	○	●	●	○
Sora (app) Consumer feed · generation	●	○	●	●	●
LTX Studio Storyboard-first suite	●	○	●	●	●
CapCut · Premiere Editors	●	●	●	●	●
SHOTBREAK Script-to-screen production suite	●	●	●	●	●

● FULL CAPABILITY ○ PARTIAL ● NOT OFFERED

Model labs are suppliers, not competitors – ShotBreak routes to whichever lab is winning. The defensible position is the workflow where creators' scripts, cast bibles, and projects live.

— WHERE WE ARE

Built and working – launching next.

✓ BUILT

Full pipeline live

Script breakdown, character & location studio, agent direction, generation, editor, and export – functional end-to-end at shotbreak.io.

✓ BUILT

6+ model integrations

Seedance, Wan, Sora, Veo, Grok Imagine and Flux image models wired through aggregated + direct APIs.

✓ BUILT

Billing & accounts

Auth, free tier, and Creator subscription infrastructure in place – revenue-ready on day one of launch.

◆ PREMARKET

Pre-launch, pre-revenue

Public gate is up while final quality passes land. This round funds the launch – investors enter before the market does.

Q3 2026

Public launch

Open the gate, launch Creator tier, creator-community go-to-market (film X/Twitter, YouTube AI-film scene, Discord).

Q4 2026

Sound & polish

Voice, music & sound-effect generation; native image-to-video continuity for tighter photo matching; mobile review.

H1 2027

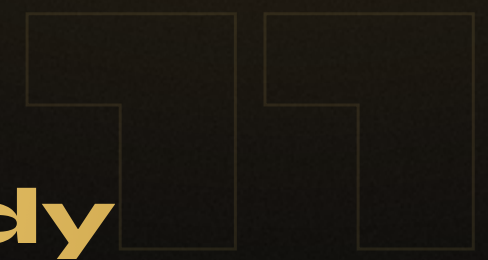

Studio & teams

Team workspaces, shared character/location bibles, brand kits, priority render queues – the agency & studio tier.

H2 2027

Platform

Public API, template & asset marketplace, and distribution partnerships – the default production layer for AI film.

— TEAM

Three founders. Product already shipped.

A small owner-operator team that took ShotBreak from idea to a working end-to-end production suite – before raising a dollar.

Kyle F.

CO-FOUNDER

[EDIT: 1-2 line bio – background, superpower, why this problem]

Scott D.

CO-FOUNDER

[EDIT: 1-2 line bio – background, superpower, why this problem]

Steve K.

CO-FOUNDER

[EDIT: 1-2 line bio – background, superpower, why this problem]

Capital efficiency as proof: the entire suite – 82-agent direction engine, six model integrations, character studio, browser-native editor, billing – was designed, built, and shipped by the founding team. Imagine the velocity with fuel.

THE ASK

Join before the market does.

\$500K

[EDIT: amount, instrument & terms – e.g. pre-seed SAFE, \$X cap, Y% discount]

Premarket round to take a finished product through public launch and to first revenue.
Amount and terms above are placeholders – set them before sending.

- ◆ **Milestone 1:** public launch of Free + Creator tiers
- ◆ **Milestone 2:** first 1,000 paying Creators (~\$180K ARR run-rate)
- ◆ **Milestone 3:** Studio/Teams tier live – positioned for a priced seed
